GLASKON 2000
CONVECTOR

Thanks to the ultra-flat glass structure, the GLASKON convectors are particularly suitable for wall mounting. The design is chic and very simple. They have several modes and distribute the heat optimally in the room. The heaters have a heat-storing glass front and simple operation via touch function.
They can be easily mounted on the wall and are therefore very space-saving. The heater works very quietly and has an overheating protection.
